

Report on National Science Day Celebration

On the occasion of National Science Day, the Department of Chemistry celebrated the spirit of scientific inquiry and innovation through a vibrant and engaging session. Students from the 4th and 6th Semesters of the B.Sc. Chemistry took the initiative to design and present two wall magazines, collectively titled "Chem Vista". These creative exhibits focused on the themes of Pharmaceutical Chemistry and Industrial Chemistry and Its Influence in Our Lives.

The wall magazines stood as a testament to the curiosity and dedication of the students, showcasing both aesthetic appeal and scientific depth. Each display brought to light the real-world applications of chemistry—how pharmaceutical chemistry contributes to health and medicine, and how industrial chemistry shapes our daily lives through innovations in materials, energy, and manufacturing.

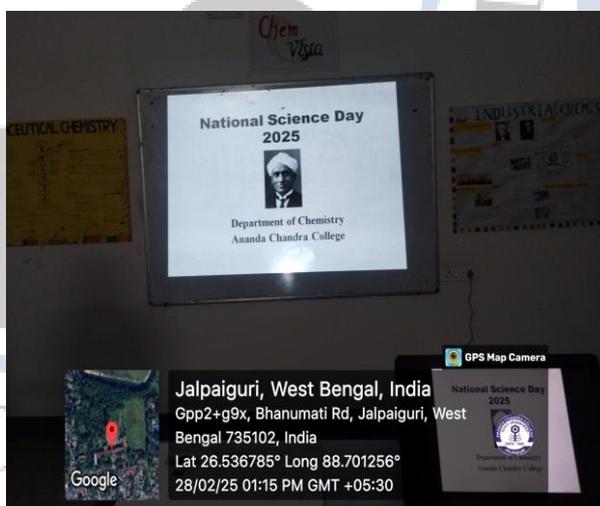

All participating students were actively involved in explaining their topics, sharing insights, and engaging in discussions with peers and faculty. The session turned into an interactive platform for idea exchange, nurturing the scientific temperament and encouraging deeper understanding.

The event beautifully resonated with the thought-provoking words:

"It is not enough to see beauty; one must also understand the scientific principles behind it."

This quote perfectly captured the essence of the celebration, as students not only displayed creativity but also articulated the scientific significance behind their work.

Overall, the event was a resounding success, fostering a culture of collaborative learning and scientific exploration among young minds.
